Server Incantations

SLES

- `chkconfig –add [service]` - starts the service on startup
- `rpm -i [path to installation rpm]` - installs the rpm (useful for installing xs-tools on a host not included in the `install.sh` file)
- `zypper up` - upgrade server to latest package revisions
- `zypper search` - search for packages containing the term you want
- `zipper dup –no-allow-vendor-change` - safer way to upgrade servers with additional repos
- `rc[process name] start|stop|restart|reload` - manage processes (tab will show you the available processes
- `SuSEfirewall2` - load and apply any custom firewall rules you have setup within YaST
